## Abstract

I make programming tools easier to learn, use, and debug. I draw on research in programming languages, human-computer interaction, software engineering, cognitive science, and learning science to answer questions like: What are [cognitive design principles](#) for programming tools? How do you teach someone to [think mathematically](#) about programming? What are the most useful applications of [program synthesis](#)? And why have we learned so little about the psychology of programming in the last 50 years?
